

Echo Consulting Presents

# The Pakistan Integrated Steel Project

From Mine to Mill: Building a National Industrial Backbone

Explore the Vision →

# A 5 Million Ton per Year Specialized Steel Complex

## Fully Integrated Ecosystem

From ore extraction to finished products, we control the entire value chain. This ensures quality, efficiency, and maximum value capture.

## Strategic Autonomy

Leveraging Pakistan's own iron ore and chromite to produce high-value specialised steels, eliminating import dependence.

We are not proposing just a mine. We are not proposing just a mill. We are presenting a **fully integrated, mine-to-product industrial ecosystem** that will leverage Pakistan's own resources to produce high-value, specialized steels that the nation and the world desperately need.

# Built on Proven, High-Quality Resources

**32-56%**

Iron Ore Grade

**EL-384**

License Area

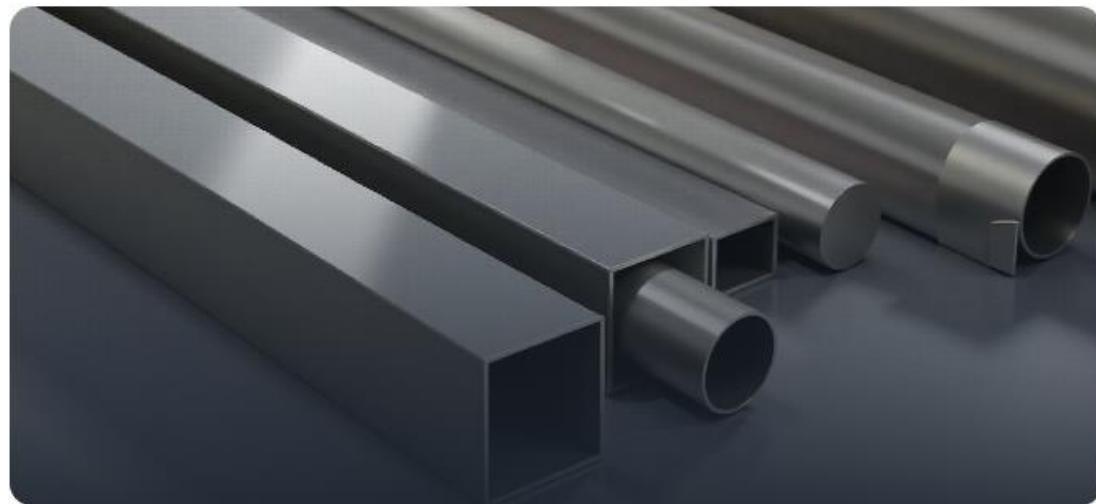

**JORC**

Compliant Report

Our ambition is built on a solid geological foundation. We have identified and quantified vast iron ore deposits with grades ranging from 32% to 56%. Coupled with local chromite sources, this provides the complete raw material base for producing a wide range of specialized steels. Pre-feasibility studies and hundreds of laboratory tests, including analysis by international labs like **Robertson Research in the UK**, have already de-risked the initial resource assessment.

# We Are Not Making Common Steel.

We Are Forging The Future.

## High-Tensile Strength Steel

For pipelines and transmission lines critical to energy infrastructure.

## Alloy & Stainless Steel

For weapon systems, shipbuilding, and precision machine tools.

## Specialized Grades

For automotive, defense, and energy sectors with premium specifications.

This strategic focus enables us to **capture premium margins** and secure long-term contracts in critical industries where Pakistan currently has little to no domestic production.

# A Project of National Scale

With Compelling Economics

**25-35%**

PROJECTED IRR

World-class returns for strategic infrastructure.

**5M**

TONS PER YEAR

Landmark National Infrastructure

# A Phased, De-risked Pathway

1

## Quantification & Bankable Feasibility

\$39M Investment

Finalize a JORC-compliant resource report and a definitive bankable feasibility study (BFS).

### Outcome

A crystal-clear blueprint for investors, de-risking all subsequent phases.

2

## Mine and Plant Development

\$1.117B Investment

Construct the mining operation, beneficiation plant, and Direct Reduced Iron (DRI) furnace.

3

## Steel Mill & Refinery Commissioning

\$1.1771B+ Working Capital

Build and commission the integrated specialised steel mill and refining complex.

# A Perfect Storm of Demand

## CPEC & BRI

A multi-billion-dollar infrastructure project creating massive, long-term steel demand.

## National Defense

Critical need for sovereign control over specialised steel for the defence industry.

## Energy & Construction

Burgeoning needs for pipelines, power plants, and urban development.

We are not creating a market.

**We are fulfilling a national imperative.**

# A Ground-Floor Opportunity in Nation Building

The project will be executed through a transparent Special Purpose Vehicle (SPV), offering a secure and structured investment vehicle.

## Strategic Monopoly

First-mover advantage is a protected, high-demand market.

## Government Alignment

Full support under Pakistan's industrial and mineral development policies.

## Legacy Impact

Build the foundational industry for a nation's economic future.

This is more than an investment.

**It is a partnership in nation-building.**

# **The Fire is Lit. The Anvil is Ready.**

We have the resources, the blueprint, and the unshakeable market demand. We are seeking visionary capital partners to join us in this foundational venture.
